Medical Necessity Verification		Patient Name: _____
Medically necessary care is justified and validated based upon the patient meeting the six criteria listed below.		
<input type="checkbox"/> Yes	<input type="checkbox"/> No	<p>Medically Necessary care and treatment is recommended or approved by a Physician</p> <p><i>A prescription and/or letter of medical necessity have been obtained by the patient's referring physician requesting the patient be provided microprocessor knee prosthesis.</i></p>
<input type="checkbox"/> Yes	<input type="checkbox"/> No	<p>Is consistent with the patient's condition or accepted standards of good medical practice</p> <p><i>The Microprocessor knee mechanism is established as accepted and routinely prescribed prosthetic option for functional level 3 individuals with a trans-femoral amputation; it is recognized and approved for care by Medicare and the Veterans Administration.</i></p>
<input type="checkbox"/> Yes	<input type="checkbox"/> No	<p>Is medically proven to be effective treatment of the condition</p> <p><i>Both Medicare & the Veterans Administration approve the microprocessor knee for functional level three (FL3) transfemoral amputees as an effective prosthetic treatment. With Medicare approval of the C-Leg and subsequent approval of L-Codes L5847 & L5989ⁱ on January 1, 2002, and the L5848ⁱⁱ on January 1, 2003. Medicare condensed these codes in January 2005 to a single code L5856. Combined with FDA approval and the VA fitting guidelines and criteria, the C-Leg knee mechanism has been identified and accepted by physicians, insurance companies, governmental agencies and the rehabilitation community nationally and internationally as a routine and a standard means of prosthetic treatment nationwide.</i></p>
<input type="checkbox"/> Yes	<input type="checkbox"/> No	<p>Is not performed mainly for the convenience of the patient or provider of medical services</p> <p><i>By comparison to mechanical knee mechanisms, the Microprocessor Knee is technically more difficult and at times may be inconvenient for both the patient and the provider. For the patient, the knee must be plugged in each night so the batteries can re-charge; non-microprocessor knee units do not require this process. For the practitioner, the Microprocessor Knee involves advanced training to program the knee for the patient's use.</i></p>
<input type="checkbox"/> Yes	<input type="checkbox"/> No	<p>Is not conducted for research purposes</p> <p><i>By answering "YES" this confirms that the above listed patient is not involved in any research programs regarding their prosthesis with Hanger Prosthetics and Orthotics and to the best of your knowledge is not involved with prosthetic research programs with any other organization.</i></p>
<input type="checkbox"/> Yes	<input type="checkbox"/> No	<p>Is the most appropriate level of service which can be safely provided to the patient</p> <p><i>Patient is a functional level three (FL3) transfemoral amputee capable of variable cadence and ambulation on uneven terrain, Patient meets Hanger and Medicare guidelines and is considered a candidate to be fit with a microprocessor knee</i></p>
