

## IMPROVING HEALTH CARE QUALITY

# Initiation and Engagement of Alcohol and Other Drug Abuse or Dependence Treatment

Blue Cross and Blue Shield of Illinois (BCBSIL) collects quality data from our providers to measure and improve the quality of care our members receive. The Initiation and Engagement of Alcohol and Other Drug Abuse or Dependence Treatment (IET) is one aspect of care we measure in our quality programs. Quality measures evaluate a prior calendar year performance.

## What We Measure

We capture the percentage of members ages 13 and older with a new episode of alcohol or other drug (AOD) abuse or dependence who received:

- **Initiation of AOD treatment** through an inpatient AOD admission, outpatient visit, intensive outpatient encounter, partial hospitalization, telehealth or medication-assisted treatment within **14 days of the diagnosis**
- **Engagement of AOD treatment** through initiation of treatment and two or more additional AOD services or medication-assisted treatment within **34 days of the initiation visit**

IET is a Healthcare Effectiveness Data and Information Set (HEDIS®) measure. See the [National Committee for Quality Assurance \(NCQA\) website](#) for more details.

## Why It Matters

About 20.4 million Americans ages 12 and older, or 7.5% of the population, had a substance use disorder in the previous year, according to the [Substance Abuse and Mental Health Services Administration](#). Treatment, including medication-assisted treatment with counseling or other behavioral therapies, can reduce substance abuse morbidity and mortality. Treatment also has been shown to improve health, productivity and social outcomes, and reduce health care costs. Despite strong evidence, fewer than 20% of those with substance use disorders receive treatment.

## Eligible Population

Members ages 13 and older during the measurement year are included in this measure.

- Report two age categories (ages 13 to 17, and 18 and older) as well as the total rate for all members 13 and older

**Exclusions:** Members receiving hospice care are excluded from this measure.

## Tips to Consider

- Screen for alcohol and drug use. Screening tools include the Cut Down, Annoyed-Guilty, Eye Opener Adapted to Include Drugs (CAGE-AID) questionnaire and the [Alcohol Use Disorder Identification Test \(AUDIT\)](#).
- Discuss the importance of timely follow-up visits with members. If substance misuse has impacted a member's health, schedule a follow-up visit before the member leaves your office.
- Reach out to members who cancel appointments and help them reschedule as soon as possible.
- Use the same diagnosis for substance use at each follow-up visit.
- Coordinate care between behavioral health and primary care providers:
  - Share progress notes and updates
  - Include the diagnosis for substance use

## How to Document

IET data is collected from claims only. Hybrid chart review doesn't apply.

For more information, see [NCQA's HEDIS Measures and Technical Resources](#).
